

Proxy Server

1-Execution

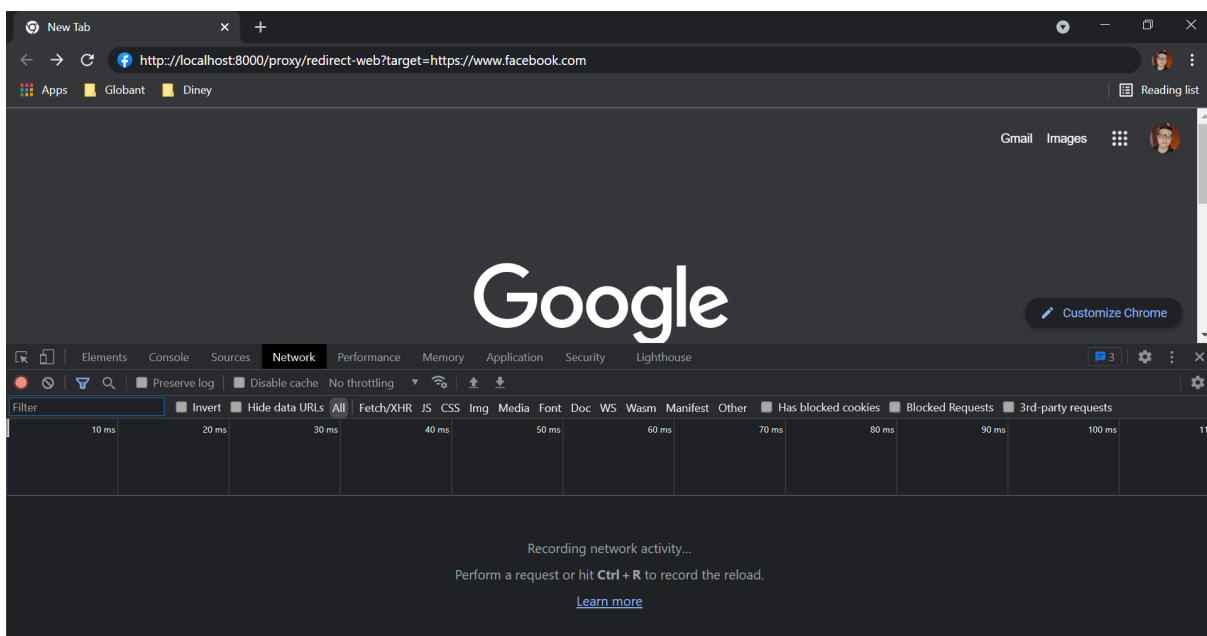

You can execute the app using the main class

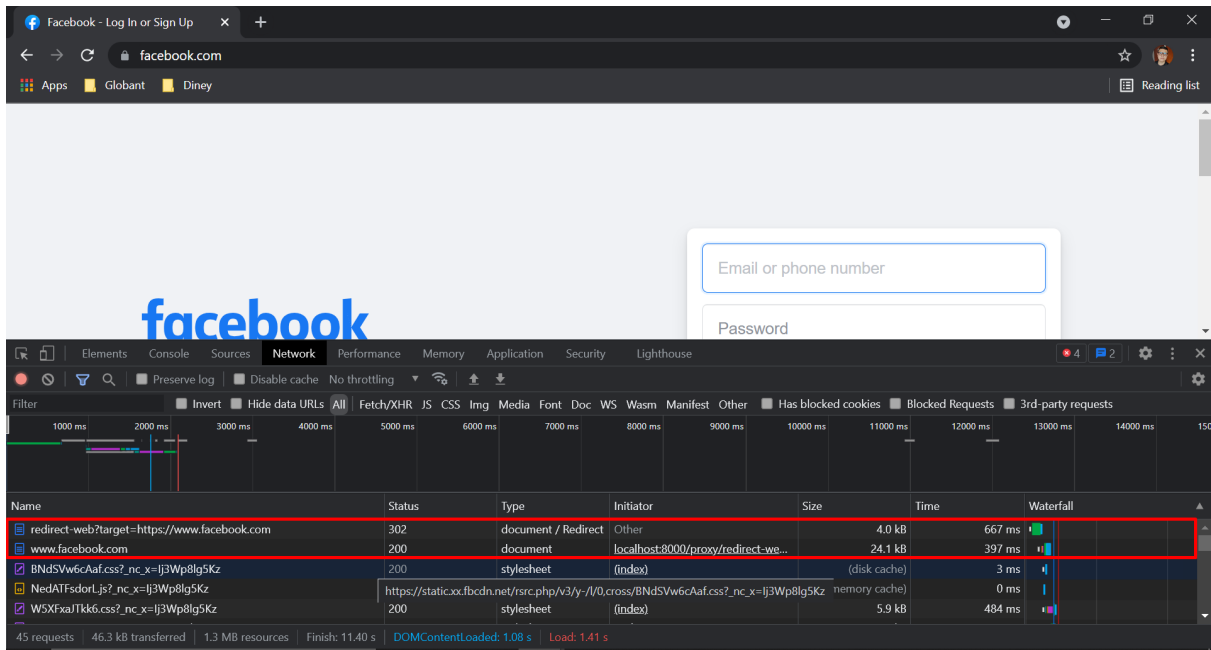

When the app starts you can use the next url layer to test the redirect, only replace “URL” for the url web page : <<http://localhost:8000/proxy/redirect-web?target=URL>>.

in this example we can see the the functionality with facebook:

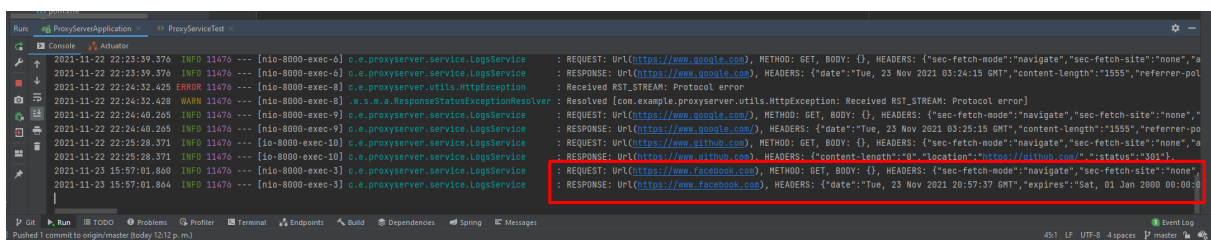

the request is : <http://localhost:8000/proxy/redirect-web?target=https://www.facebook.com>

and then we redirect

Logs

How it works

The user ask for a specific web page, that request past throw the proxy server where is response with a redirect status and finally the web browser will show the target web page to the user.
